

Option 1

Manually set SecurID region

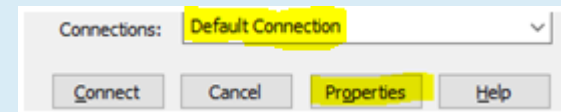

- Launch the VPN client
- Click on the 'Connections' drop down
- Select the appropriate SecurID region for your location
- **NOTE: the options may be located near the bottom of the list**

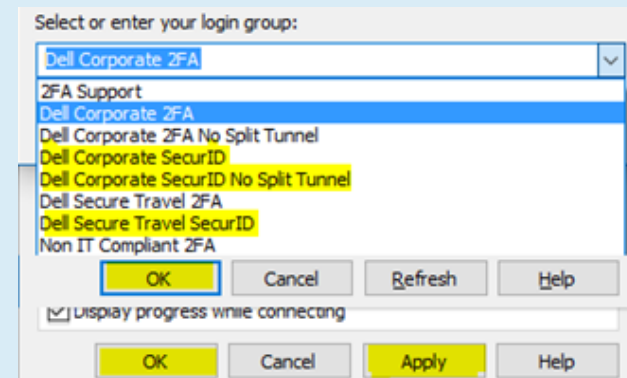

Option 2

Manually set SecurID options

- Make sure 'Default Connection' is selected, then click on the 'Properties' button

- Launch the VPN client
- Click the 'Change' button and select the appropriate SecurID option from the dropdown
- Click 'OK' then 'Apply' and 'OK'

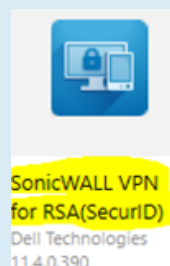

Option 3

SecurID Software Center Install

(requires a system restart) – Automatically set SecurID for global access

- Close the VPN client
- Click on the Windows start button
- Open 'Software Center by clicking' on the icon

- After Software Center loads click on the '**SonicWALL VPN for RSA(SecurID)**' package

- When the package opens click on the 'Install' button to install it

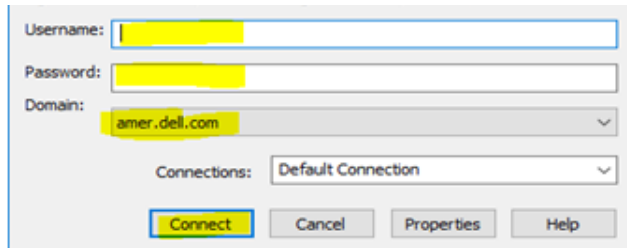

Click 'Continue' when prompted to continue the installation

Once the package installs you will be prompted to restart your system

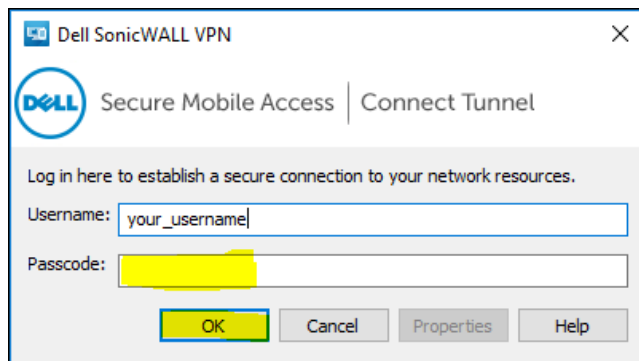

- Launch the VPN

3) Enter your credentials and select the appropriate domain from the drop down and click 'Connect'

4) When prompted for the 'Passcode', enter the passcode from SecurID token client and click 'OK' to connect

NOTE: The SecurID client software screen shots below may differ depending on your soft-token type. (Windows PC, Android, IOS)

5) To generate a passcode, open SecurID client, enter the PIN into the token and click the arrow

6) The passcode appears and will automatically change every 60 seconds,

Enter this passcode in the VPN client 'Passcode:' prompt (step 4)
